

How we see things

1. What name is given to objects that give off light?
2. To see a dog, light has to travel to the dog first. Where does the light travel next?
3. What does the dog's body DO to the light?
4. How much light do transparent objects allow to pass through them?
5. Give an example of a transparent object.
6. How much light do translucent objects allow to pass through them?
7. Give an example of a translucent object.
8. What 2 things happen to any light that doesn't pass through a translucent object?
 - i.
 - ii.
9. What do we call objects that allow NO light to pass through them?
10. If an object blocks light coming from the Sun (or any other object that gives off light), what can form?
